
Table 1 Sensitivity/Tolerance of *T. harzianum* strain to Cr (VI)

Cr (VI) Conc. (mg /L)	Radial growth (mm)
5	41.5 (4.60) ^a
10	34.2 (21.37)
20	19.2 (55.80)
30	3.75 (91.00)
40	2.25 (94.00)
Control ^b	43.5
^c CD at 5%	0.60

Note: ^a Radial growth on PDA medium after 5days incubation on the treated plates. Values in the parenthesis indicate percent inhibition of the mycelial growth compared to the control plates;

^b Radial growth on PDA medium after 5 days incubation on control plates; ^c Critical difference
